

# REFILLS - replacement rubber blades for frame window wipers

## Features

- New generation click system.
- Wipe quality and service life virtually the same as the original wiper.
- High resistance to temperature and acid.
- UV-resistant.
- Environmentally friendly.
- Fits on all windscreen wipers, front and rear.
- Fits on all wiper brands.
- Assembly instructions + corresponding template included.
- Industrial packaging with Euro perforation.

## Advantages

- Ideal supplement to every windscreen wiper range.
- Quick and easy mounting.
- Can be used on almost all vehicles introduced on the market.
- Considerable time savings.
- **No** need to look for and obtain "exotic" wipers.
- Very little stock needed.
- No shelf-warmers.

## Application:

**Note:** Cut the refill to size after inserting into the wiper frame when there is an excess length of approx. 1.5 cm. Never press the bow claws together, otherwise the shaped rubber will not move in the guide, thus causing the wiper pattern to deteriorate!
