

Premium UV leak detection additive

Fluorescent additive for localising leaks in R134a and R1234yf air-conditioning systems in accordance with SAE J2297

- Sufficient for 32 applications in a car or 16 applications in a lorry
- Compatible with PAG and ester oil
- High proportion of fluorescent ingredients
- Does not damage O-rings and seals

Contents	240 ml

Art. no. 0892 764 034

P. Qty.: 1 / 12

Details/Application

For reliable localisation of leaks and micro-leaks in R134a and R1234yf air-conditioning systems. Can be used in air-conditioning systems with electric compressors (hybrid, start/stop, electric vehicles).

Instructions

- Draw the refrigerant out of the air-conditioning circuit and then draw a vacuum
- Unscrew the PAG fresh oil tank from the air-conditioning service unit and dispense the required amount
- Fill up the leak detection additive and attach to the fresh oil tank coupling. 7.5 ml (1/4 oz) are sufficient to service an air-conditioning system in a car, 15 ml (1/2 oz) in a truck
- Feed the leak detection additive into the air-conditioning circuit via the air-conditioning service unit

Notice

Only insert the leak detection additive into the air-conditioning system via the red fresh oil tank coupling.

The usage instructions are recommendations based on the tests we have conducted and are based on our experience; carry out your own tests before each application. We do not assume any liability for a specific application result due to the large number of applications and storage and processing conditions. Insofar as our free customer service provides technical information or acts as an advisory service, no responsibility is assumed by this service except where the advice or information given falls within the scope of our specified, contractually agreed service or the advisor was acting deliberately.
