

## Diesel Add Treatment

**For lubricating diesel fuel systems in passenger cars and trucks.**

- Prevents desposits in combustion chamber and injectiion system.
- The function enhancer increases the lubricating effect of low sulphur fuel, thus preventing surface friction and a resulting failure of a injection system.
- Compatible with all modern diesel oxidation catalytic converters.

### Details/Application

For all diesel engines with common rail and pump nozzle technology.

### Instructions

- Add content of the can to the tank
  - There should be atleast 10 Ltrs of fuel in the tank
- 250ml is sufficient for 40 to 50 ltrs of Diesel

### Notice

- We recommend the use after every 2000 KMS and preventatively after every repair to the injection system and to the engine. Free from sulphur, phosphourus ,metals and acids.

These instructions are only recommendations, we advice preliminary testing before use.
